

## PURGE PRO MINI-MAX

---

The Purge Pro Mini-Max is a flushing and purging system designed to fill the gap between residential and commercial geothermal applications.

“Mini-MAX” will flush systems and circuits up to 30 tons and provides geothermal installers the capabilities to flush and filter debris from the system, purge trapped air bubbles, reverse flow, hydrostatically pressure test, and flow test—all from one convenient unit.

“Mini-Max is frame-mounted, and fits easily into a pickup truck. The all-in-one design makes MINI-MAX the most productive and convenient commercial purging system available to geothermal installers.

### PROFESSIONAL GEOTHERMAL PURGING SYSTEM

Mobile — Powerful — Simple

**Geothermal Supply Company Inc**

*Designing Today For A Better Tomorrow*

Features:

- Gasoline Powered Centrifugal Pump
- 100% Flow Filter - 50 Micron Filter
- Reverse Flow Capabilities
- Supply/Return 160 psi Dial Gauges
- Flow Meter and Pressure Gauge for Flow Testing
- 150 psi Hoses with Quick

Connect Couplings:

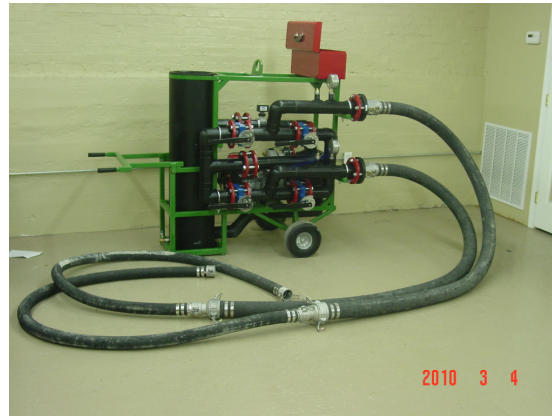

3" - 20 ft

2" - 20 ft

- Necessary Reducing Quick Connect Couplings and NPT Adapters

Operational Advantages:

- Hoses easily connect to interior headers or exterior distribution vaults
- Reverse flow by simply opening and closing butterfly valves
- 50 micron filter removes all debris from system

Designed To:

- Be the most productive and convenient geothermal purging system available to loop contractors
- Save time and money during system purging
- Satisfy engineering purging and flow test specifications
